

# BlackBerry Notes

## The Challenge

Employees want an easy way to access their business notes from anywhere, and enterprises want their employees to be up-to-date while on the go. However, native note-taking solutions fall short—they lack the security and desktop experience necessary for the modern business user.

## The Solution

BlackBerry® Notes is the secure note-taking solution designed for enterprise users. With BlackBerry Notes, employees can stay on top of business workflows by creating, editing and maintaining a tile-view list of notes—all on mobile.

### Boost User Productivity

With BlackBerry Notes, users can quickly and securely manage notes and sync them back to Microsoft® Exchange for a full desktop experience on mobile. Users can switch between mobile and desktop at any time with the assurance that all notes are up to date.

BlackBerry Notes increases overall productivity by enabling users to access to business insights in seconds. This means no more delayed workflows, so work can be completed even faster.

### Experience Richer Note Taking

BlackBerry Notes offers features that go beyond traditional note-taking tools.

- Experience a tile-view list to view notes with one glance
- Organize any note by title, category or date for easy searching on the go
- Utilize rich text to emphasize key points for future reference.
- Send notes as an email for quick collaboration with colleagues.

## Maximize Your Current Investment

Many enterprises have already invested heavily in Microsoft® Exchange to enable note-taking on the desktop, but not on mobile. BlackBerry Notes helps maximize your investment in Microsoft Exchange by enabling you to extend business notes beyond the desktop.

## Keep Your Notes Secure

BlackBerry Notes is part of BlackBerry Secure, a comprehensive endpoint-to-endpoint approach to security. BlackBerry Notes is built on BlackBerry Dynamics, and all data in the application is protected in the secure BlackBerry container. With FIPS-validated cryptography, corporate data is protected both in transit and at rest, eliminating the risk of data leakage. All note data will always remain in the enterprise.
