Workspaces Document Controls

- Track, revoke, wipe, or end file access at any time
- Enable dynamic and customizable watermarking
- Offers screen capture protection
- Set permissions to access, download, view, edit, copy, print, and forward

The Challenge

Law firms and service providers that service the legal industry face the challenge of adopting a digital transformation strategy that meets their client's needs and the profession's demands to protect against the increased risks of data breaches that can occur with file sharing. As law firms are increasingly embracing mobility and collaboration, they are becoming a target for valuable confidential information that they receive such as corporate strategies, trade secrets, business transactions, and more. The value associated to this type of information stored by law firms can be very appealing and could result in an increase in the number of potential hacks across the legal industry. Law firms need a secure content sharing platform that allows them to disclose confidential information with staff and third-party vendors, enable mobile staff productivity and securely transfer large files, while protecting client confidentiality.

The Solution

BlackBerry® Workspaces supports the law firms to become even more mobile and collaborative while reducing the risk, complexity, and cost of sharing information across and beyond the organization's corporate network. With BlackBerry® Workspaces, attorneys and staff can more safely access, share, and collaborate on the most sensitive files, using a mobile or desktop device. With file-level encryption, user access controls, and digital rights management protection, BlackBerry® Workspaces is the solution your law firm needs.

Easy-to-Use DRM Controls

Secure communications are becoming a non-negotiable requirement for legal services. BlackBerry® Workspaces is the ultimate secure file sync and share solution that will help your organization meet the compliance regulations and enable secure productivity. Whether your employees are accessing files in a client meeting or in a courtroom, Blackberry® Workspaces protects your firm's sensitive client data by controlling and tracking who accesses it, how, when, and where – even after the file is downloaded or leaves the shared workspace. With BlackBerry® Workspaces, your employees can intuitively and safely share documents, ensure access is granted to authorized users only, and revoke access anytime if required.

File-Level Security and Enforcement

The files are encrypted and controlled – at rest, in transit, and on the device, reducing the risk of a breach or loss of data and information. Your employees can securely access files from anywhere. With 256-bit file encryption and the industry's highest level of security, BlackBerry® Workspaces provides your employees with easy and secure collaboration.

Key Use Cases in Legal Services

Protect Client Confidentiality and IP

Attorneys work closely and share documents with colleagues and with external vendors and partners. It is essential for attorneys to share, edit, and control confidential legal documents from a mobile or desktop device, from within or outside of their corporate network. BlackBerry® Workspaces enhances the collaboration experience by providing an integrated suite of collaboration tools and full document tracking. BlackBerry® Workspaces makes external collaboration easy, including SharePoint and file shares, along with features that protect against document leaks and unauthorized forwarding.

Revoking Access – Even After a File Leaves the Workspace

Clients are entrusting you to keep their sensitive information secure. If information gets into the wrong hands, it may affect your firm's credibility. With BlackBerry® Workspaces, files are automatically encrypted and controlled – so rest assured, the data is secure, regardless how your employees and staff access the files. BlackBerry® Workspaces allows simple and secure sharing of files and offers the ability to revoke access anytime if required.

End-to-End File Encryption

Legal files should always be encrypted to meet the rigorous standards of the industry. Your clients entrust you with their sensitive information, and it is your firm's responsibility to ensure that these files are secure. With BlackBerry® Workspaces, files are always encrypted: in transit, at rest, and in use. You can control what can be done with the file itself – whether it is printing, editing, copying, downloading, or forwarding it to someone else. You can safely share data containing PII with automatic encryption and digital rights management. By ensuring that data is encrypted, BlackBerry® Workspaces contributes to reduce the risk of a breach or loss of data.

About BlackBerry® Workspaces

BlackBerry® Workspaces makes your content secure wherever it travels. With BlackBerry® Workspaces, stakeholders can safely access, share and collaborate on even the most sensitive files, using any device – desktop (Windows®, Mac®) or mobile (iOS®, Android™, BlackBerry® 10). By combining a user experience that's as easy and intuitive as any consumer solution with a unique data-centric architecture (which embeds protection right in your files), BlackBerry® Workspaces is designed to meet the needs of your organization, IT team, and users.
